

LipiVage[®]

An innovation in
fat harvesting
that gently separates and
concentrates fat cells within a
closed, sterile device for
**improved quality while
saving valuable time.**

INNOVATIONS IN REGENERATION

LipiVage® improves the quality and simplifies the process of fat harvesting.

LipiVage® is the ideal choice for harvesting the ideal filler.

Many agree that fat makes an ideal dermal filler. It is natural, readily available and may even provide permanent results. However, until now, fat harvesting has required relatively difficult, inefficient and time-consuming processing steps. In addition, traditional methods of processing fat may have been detrimental to cell viability and lasting results.

LipiVage® was specifically created for harvesting fat simply, quickly and gently. . . giving fat a better chance for survival.

How does LipiVage® work?

The tubing set is connected to an aspirator and the vacuum level is set. The transfer adapter is removed and the recommended aspiration cannula is attached. Fat is harvested for approximately one minute and then fluids

are drained for a few seconds. Fat is then transferred into injection syringes using the transfer adapter supplied. The plunger tip is used to wipe the inner walls clean in between harvests. Harvesting steps are repeated for additional fat if needed.

Harvest

1 Fat cells collect in the filter chamber suspended within the harvester body.

Fat cells are gently pulled toward the inner walls of the filter and are collected along the length of the filter in front of the blue plunger tip, while fluids wash through.

Transfer

4 After fluids are drained, the concentrated and cleaned fat is immediately ready for injection. The unique LipiVage® plunger tip design gently wipes the fat from the inner filter walls and transfers the fat as the plunger is pushed forward gradually.

Concentrate

2 Once inside, the fat is gently concentrated as the tumescent fluid is removed. Fluid and oils pass through the fat and the filter walls and are carried to the waste receptacle via the tubing set. Due to the low vacuum, there is very little oil present because fewer fat cells are damaged during harvesting.

Optional Lavage or Washing Capability

3 LipiVage® can also be used in conjunction with preferred proteins, PRP or growth factor enriched solution to gently lavage the harvested fat cells within the LipiVage® device.

Harvesting a Better Way

LipiVage® is an innovative product that provides a better way to harvest fat. Provided with the security and convenience of a sterile packaged device, LipiVage® is the first product to provide an alternative to the potentially harmful processes currently used to harvest fat.

Gentle

LipiVage® minimizes cell damage by gently harvesting fat at low vacuum levels⁽¹⁾. Standard syringe harvesting cannot do this.

Protects Fat Cells

LipiVage® protects fat cells by sparing them from the damaging g-forces of centrifugation^(2,3), a common method used to separate fat from fluids.

Saves Time

LipiVage® allows the user to separate and concentrate fat cells within the device while harvesting. Harvested fat is ready to transfer and inject immediately.

Why LipiVage®?

- Closed, sterile system
- Gentle on fat cells; uses low vacuum
- No centrifuge required
- No need to pour off liquids or oils after harvesting
- Concentrates fat during harvesting
- Fat is immediately ready for re-injection
- Disposable; no sterile processing required
- **NEW** Twist-lock cannula connection (LipiVage® Kit with disposable cannula) ensures a positive lock throughout the procedure
- **NEW** Universal tubing attachment ensures a fast and easy setup with readily available tubing

New Features

Twist-Lock Cannula Connection

The disposable cannula twists, clicks and locks for greater stability while harvesting.

Cannula Harvesting Design

New configuration ensures constant vacuum even when harvesting superficially.

Universal Tubing Connection

Tubing is held tightly in place with the new graduated fitting.

Available with LipiVage® Kit ONLY

Product has a 3-year shelf life.
